

Possible impacts of removing mask mandate and/or the dial on 4/15 or 5/15 assuming the current TC =68% and rapid variant growth

Total Active Hospitalizations Under Rapid Growth of B.1.1.7 and B.1.427/429, 68% TC

In these projections, we assume continued vaccine roll-out and that transmission control is maintained at the current level until 4/15 (left) or 5/15 (right). In the projections, hospitalizations in the 65+ group are halved to account for the high efficacy of the vaccine in preventing hospitalizations.
